All prices allow for delivery and installation within a 150 mile radius from NN29 postcode (call for quote if outside of this area)

All costs are based on good site access, a suitable flat and cleared base to install onto and any excess spoil left on site

We can quote separately for additional basework as a separate cost if so required

PLEASE CALL OR EMAIL US FOR A PRICE OR QUOTE

FUNDING, FUNDING, FUNDING!

We publish a Funding Guide which lists very useful information about grants which are applicable to our product range plus useful tips on how to successfully approach grant providers and corporate sponsors.

We can also support schools in accessing up to £10,000 to help schools achieve their aims around site development through providing a grant fundraising service. This service includes identifying potential grants sources and completion of the application process. For this service we charge 12.5% of any grant received meaning if applications are unsuccessful no charge is incurred by the school.

In order to complete an application we would collect basic information on the school via email and arrange a short 15 minute phone call to identify the difference an installation would make to the school. Once you have a quote from the Hideout House Company we will be able to provide a fully completed application form ready for submission.

"Ask us the three main priorities for the environment: Eco education, eco education, eco education"

If we are going to make any significant difference to help saving our planet, then awareness about environmental issues and embracing social responsibilities has to come as second nature to this generation of school children.

So to assist in this process, we have put together a range of unique and creative product packages which compliment the major eco schools topics - **RENEWABLE ENERGY, BIO-DIVERSITY, SCHOOL GROUNDS, HEALTHY LIVING, RE-CYCLING AND GLOBAL CITIZENSHIP.**

Our products are designed to be fun and engaging so that children will want to participate and thereby learn about the sustainability knowledge process, time and time again.

Our whole ethos is to create products which involve and engage the children: monitor, measure and use green energy from the sun, water and wind; pedal a dynamo bike to create enough power for laptops and tablets; build an "igloo" den from recycled milk carton bottles.

For ease of ordering and reference, we have put the various products into clearly defined categories or zones...so you can start with one package and add on other zones over time.

SCHOOL ECO ZONES
